Birse CE, Rosen CA; Ruben SM, Barash SC,

WPI; 2001-235357/24. P-PSDB; AAG75407. Nucleic acids encoding 4277 human colon cancer-associated polypeptides, useful for preventing, diagnosing and/or treating colorectal cancers.

Claim 1; Page 3407-3408; 9803pp; English.

AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used

                                                                                                                                                                                                                                                 180
                                                                                                                                                                                                                                                                     277
to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH31916 to AAH37204 and AAB37789 represent sequences used in the exemplification of the present invention. N.B. agges 66 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1021 to 1052, 7921 and 7922

The invention relates to detecting the presence or diagnosing the risk of a liver cancer in a patient. The method involves detecting in a biological sample obtained from the patient aberrant expression of a gene encoding an insulin-like growth factor binding protein (IGFBP). The method is useful for detecting the presence or diagnosing the risk of a liver cancer or for screening agents in a patient. The agent is useful for the amendeacture of a medicament for treating and/or preventing liver cancer. The present sequence represents a human IGFBP-3 polypeptide encoding DNA (GenBank Accession No. BC000013)

Claim 1; SEQ ID NO 42; 37pp; English.

The invention relates to a combination comprising several polymuclectides having any one of 127 sequences (S1) such as the sequence of human calmodulin gene, human mRNA for KIAAO910 protein, leukorriene A4 hydrolase, human CGI-142 protein mRNA, human X+ channel beat 2 subunit mRNA, etc., and their complements. The cDNAs are differentially expressed in LDS (Lipopolysaccharide)-treated foam cells. Also included are obtaining an extended or full length gene from a library of nucleic acid sequences, an expression vector containing the nucleic acid, a host cell sequences, an expression vector containing the nucleic acid sequences, an expression vector appropriate appearing as ADE25750 and ADE25751, producing a protein by culturing the host cell and a composition comprising a protein by culturing the host cell and a composition comprising a protein by culturing the host cell and the composition comprising a protein by culturing the host cell and the composition comprising a protein by culturing the host cell and the composition comprising a protein by culturing the host cell and the composition of differential expression of one or more compounds to throughput screening effrom a subject with a theoretides in a sample. The sample is from a subject with a theorypout screening of a library of molecules or compounds to identify a ligand which binds a polynucleotide. The protein is compounds to identify at least one ligand which specifically binds a compounds to identify at least one ligand which specifically binds a compounds to identify at least one ligand which specifically binds a compounds to identify at least one ligand which specifically binds a compounds to identify at least one ligand which specifically binds a compounds to identify at least one ligand which specifically binds a compounds to identify at least one ligand which specifically polynations are useful for diagnosing cardiovascular disorder. The foam cell-expressed nucleic acids are useful a semple, diagnosing cardiovascular disorder. The present sequence

This invention relates to a combination comprising several cDNAs that are differentially expressed in activated vascular tissue. The invention also discloses a high throughput method for detecting differentially expressed consciouses a high throughput method for detecting differentially expressed contact antiarteriosclerotic cytostatic, cardiant; hypotensive; antidiabetic; cynaecological, vasotropic and cerebroprotective activities and may be used in gene therapy. The CDNAs of the invention may be used in a high-throughput methods for detecting differential expression of one or more compound to compound that specifically binds to more compounds to compound that specifically binds to more invention. A protein encoded by the CDNA may be used to screen several molecules or compounds to identify a nationally binds to compounds to identify a ligand that specifically binds to compounds to identify a national or compounds to intentify a national or compounds to intentify a national or compounds to intentify a national or compounds to intention of staging, treating, or monitoring the progression of treatment cof a vascular disease, e.g. atheroscalerosis, cancer, coronary artery disease, hypertension, diabetes, pre-eclampsis, ischaemia-reperfutation cof enterior or gene expression analysis of several new nucleic acid molecules. Antibodies to the proteins encoded by the cDNAs can also be used for large-scale compounds that a differentially expressed in activated vascular tissue. Note: The contact disease as obtained in electronic format directly from USPTO at the protein expression contact disease. The contact disease contact disease.
                                                                        Human, gene; se; vascular tissue; cytostatic; atherosclerosis; cardiant; hypotensive; antidiabetic; gynaecological; vasctropic; cerebroprotective; gene therapy; vascular disease; cancer; coronary; artery disease; hypertension; diabetes; pre-eclampsia; restenosis; ischaemia-reperfusion injury; stroke.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Combination for diagnosing, staging, treating, or monitoring the progression of treatment of a vascular disease, e.g. atherosclerosis, comprises several CDNAs that are differentially expressed in activated
Human cDNA #775 differentially expressed in activated vascular tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

The present invention relates to the isolation of human polynucleotide sequences that are differentially expressed during foam cell differentiation. The polynucleotide sequences of the invention or a composition comprising these polynucleotides are useful as a high polynucleotides in a sample. The polynucleotides are useful as a high polynucleotides in a sample. The polynucleotides can be used in the diagnosis of disorders associated with foam cell development such as atherososis, cerebral stroke, and cardiovascular disorders such as pornary artery disease. The polynucleotide sequences can also be used per primers and probes. The polynucleotide sequences can also be used useful in gene therapy, AAS94746-AAS9501 represent the human ealso polynucleotide sequences of the invention which are differentially

This invention relates to a novel method of characterising prostate tissue in a subject and to compositions and methods for cancer diagnostics, including cancer markers, in particular prostate cancer. Prostate cancer. Prostate cancer. Prostate cancer. Additional serum and tissue blomarkers would aid diagnosis. The invention may provide means of producing compounds with a cytostatic activity or

New nucleic acid molecules capable of promoting chondrogenesis, useful for diagnosing and treating cartilaginous tissue degeneration conditions,

```
The invention relates to new isolated nucleic acid molecule comprising a nucleic acid molecule consisting of a gene differentially expressed in cells undergoing differentiation from mesenchymal cell to a conditions to chondroblastic phenotype, or hybridising under stringent conditions to chondroblastic phenotype, or hybridising under stringent conditions to them (or their fragments). Also included are expression vectors, which induce differentiation of a mesenchymal cell and may be used as an immunogan), binding partners of the polypeptides or peptide fragments of immunogan), binding partners of the polypeptides, a method for immunogan ), binding partners of the polypeptides, a method for defenciation induction activity of a molecule, a method for defenciation induction activity of a molecule, a method of diagnosing a condition characterized by aberrant expression of a nucleic acid molecule or its expression product, a method for treating a cartilaginous rissue degeneration condition in a method for treating a cartilaginous tissue degeneration condition, and a soliciphase nucleic acid molecule array consisting essentially of a set of nucleic acid molecule array consisting essentially of a set of nucleic acid molecule array consisting essentially of a set of nucleic acid molecule as cited above (or known from known genes shown to be differentially expressed in developing mesenchymal cells using the technique of representational difference analysis, RDA), its expression products or fragments, fixed to a solid substrate; the nucleic acids, polypeptides and agents are useful for treating cartilaginous tissue degeneration conditions such as oscerothmic essentials, arthritis, atthritis, actualing carthritis, arthritis, according in developing mesenchymal cells and solicies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      141
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        201

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ACF12828 to ACF12947 encode the human cervical cancer marker proteins (I) given in ABR92047 to ABR92164. A higher level of expression of (I) than normal indicates the presence of cervical cancer. Also described: (I) a certor (II) containing (I); (2) a host cell (III) containing (I); and (3) assessing (MI) whether a patient is afflicted with cervical cancer, comparising comparing the level of expression of a marker in a patient's comparising comparing the level of expression of the marker in a patient's cervical cancer sample, where a significant increase in the level of cervical cancer sample, where a significant increase in the level of cortor sample is an indication that the patient is afflicted with cervical cancer. (I) has cycostain activity, and can be used in gene therapy and in vaccines. (I) is useful in detecting, characterising, traventing and treating human cervical cancers. (I) may also be used in various prognostic assays, pharmacogenomics and in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated nucleic acid molecule useful for detecting, characterizing, preventing and treating human cervical cancers, in various prognostic and diagnostic assays, in pharmacogenomics and in monitoring clinical trials.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    240

The present invention describes nucleic acid sequences (I) having a different degree of expression in hepatoblastcoma from their expression in normal liver tissue. ACCS1116 to ACCS1219 represents specifically claimed examples of (I). Also described. (I) nucleic acids stringently or amples of (I). Also described. (I) nucleic acids stringently or partial sequences containing one or more of 104 listed sequences (II, see ACCS119), including the 79 (I, see ACCS116 to ACCS129), including the 79 (I, correction for cancer detection based on sequences derived from them; (3) or cancer detection based on sequences (II); (4) marker proteins for cancer detection based on sequences (II); (4) marker proteins for cancer detection based on their partial sequences. The nucleic acid sequences are useful in the detection and diagnosis of the cancer including liver, colon, herest, kidney, bladder, ovary and thyroid cancer, especially for hepatoblastoma, hepatocellular carcinoma, herotic cancer, especially for hepatoblastoma, hepatocellular carcinoma, chyroid carcinoma and Wilm's tumour. They are also used as markers for predicting the prognosis of these tumours. ACCS1220 to ACCS1233 represent prepared results are also used as markers for predicting the prognosis of these tumours. ACCS1220 are related to human partial (polo-like kinase-1), which is located on chromosome 16plz
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         94 GCCCCGGTTGCAGGCGTCATGCAGCGGCGCGACCCACGCTCTGGGCCGCTGACT 153

It is expressed in pRK5-ibp1.1, and used to transform , eg COS cells or human embryonic kidney cells transformed with adenovirus Eladneib (2938). (Updated on 25-MAR-2003 to correct PA field.)

The present invention relates to a method for ameliorating the effects of skin disorders. The method comprises contacting the skin with an cantisense oligonucleotide, (for Insulin-like Growth Factor [IGF]-1 cantisense oligonucleotide, (for Insulin-like Growth Factor [IGF]-1 captured is capable of inhibiting or reducing growth factor mediated cell proliferation, inflammation and/or other disorders. The present sequence is the coding capual and/or can be used to design the antisense oligonucleotides of the present invention (see AAF45151 and AAF45153-74510). The method is useful for ameliorating the effects of portasis; clothyosis, pityriasis, ruba, pilaris, serborthoea, keloids, keratosis, neoplasias, scleroderma, warts, benign growths, cancers of the skin, a neoplasias, scleroderma warts, benign growths, cancers of the skin, brain or skin, growth factor-mediated malignancies, other sclerotic disease, kidney disease, hyperplasia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ű

                                                                                                                                                                       The present invention relates to novel human secretory or membrane proteins (ADA540712-ADA55710) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.

This invention describes novel polypeptide sequences (I), fragments of expression did their encoding nucleic acids (II) which are highly expressed in human uterine myoma. (II) are used for recombinant carpension of (I) and to isolate complete genes. (I) are used to identify agents sultable for treatment of uterine carcinoma, to directly treat this form of cancer (including expression from gene therapy vectors) and are used in a preparation for cancer treatment. (I) is also used for the generation of specific antibodies. (II) are identified by assembling ESTS (expressed sequence tags) from a particular tissue type before comparison of specific antibodies. (II) are identified by assembling ESTS (expression patterns. This allows a significantly longer fragment of the gene to be revealed and therefore reduces the number of failures associated with the fact that ESTS from different libraries may represent different parts of the same unknown gene, discorting the estimated different parts of the same unknown gene, discorting the estimated frequency of occurrence in a particular tissue. Al241950-241980 represent senced the protein sequences represented in ANYS9921-YS9940 ğ New nucleic acid sequences expressed in uterine myoma, and derived polypeptides, for treatment of uterine carcinoma and identification therapeutic agents. Dahl ပဲ Sequence 2191 BP; 599 A; 525 C; 539 G; 528 T; 0 U; 0 Other; Pilarsky Schmitt A, Hinzmann B, Claim 3; Page 50; 86pp; German. Rosenthal A, Specht T, WPI; 1999-602380/52

polynucleotides and polypeptides, useful for developing a diagnostic er or medicines for regulation of their expression and activity, or targets of gene therapy

ద δ 셤 8 유 ਨੇ g ઠ ద ò

Claim 1; Page; 222pp; English

The invention discloses a polynucleotide comprising a sequence selected from 1970 fully defined nucleotide sequences which encode movel control of a polypeptides which encoded by the polynucleotide or its partial peptide, an antibody binding to the polypeptide or peptide of the polynucleotide, immunologically assaying the polypeptide or peptide of the polynucleotide by contacting the polypeptide or peptide with the antibody of the encoded protein, and observing the binding between the two, a transformant carrying the polynucleotide in an expressible manner and an antisense polynucleotide. The oligonucleotide is useful as a primer for synthesising the polynucleotide, or as a probe for detecting the polynucleotide. The polynucleotide is an encoded or proteins are useful as pharmaceutical agents and many disease-related or proteins are useful as pharmaceutical agents and many disease-related condicions for regulation of their expression and activity, or as targets of genes may be included in them, for developing a diagnostic marker or medicines for regulation of their expression and activity, or as targets of genes them can be useful as indicators for diseases (e.g. osteoporosis, transcription-related proteins, disease-related proteins and encoded proteins and seases. The cucoding them can be used as indicators for diseases (e.g. osteoporosis, neurological diseases, cancer, tumours. The coby may be used to regulate the activity or expression of the invention. Once is sequence presented is a cDNA of the invention. Note: Some of the sequence data for this patent is not represented in the printed specification, but is based on sequence information supplied by the European Patent Office.

Patent No. 5785547
GENERAL INFORMATION:
APPLICANT: Sommer, Andreas
APPLICANT: Ogawa, Yasushi
APPLICANT: Tao, Peggy
TITLE OF INVENTION: METHOD OF PRODUCING IGF-1 AND IGFBP-3
TITLE OF INVENTION: MITH CORRECT FOLDING AND DISULFIDE BONDING
NUMBER OF SEQUENCES: 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TTTACCATTAAAAAAA 2486

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    912
